Chemistry and Physics of Lipids, 43 (1987) 301–303
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX
Volume 43(1987)

o-Acetylsalicylic acid, membrane, infrared, phenol, salicylic acid, 47
Active alumina substrates, methyl linoleate hydroperoxide, chemiluminescence, oxidation kinetics, lipid peroxidation, 265
Adsorption, monolayer, surface potential, electric double layer, phospholipid, 161
Alcohol-lipid interactions, ^{13}C-NMR, 215
Aplysina fistularis, marine organisms, *Axinella verrucosa*, *Higginsia tethyoides*, *Tethya aurantia*, HPLC, mass spectrometry, 101
Axinella verrucosa, marine organisms, *Higginsia tethyoides*, *Tethya aurantia*, *Aplysina fistularis*, HPLC, mass spectrometry, 101

Biological activity; platelet-activating factor; lyso derivatives, 247
4,4'-Biphyridinium ylides, vesiculating pH indicators, 147
Bolaamphiphiles, nucleic acid coating, transfection, 193
Branched chain fatty acids, phosphatidylcholines, differential scanning calorimetry; phase transitions; molar heat capacities, 257
Branched long chain base, cerebroside, glycolipid, 9-methyl sphingadienine, human pathogen, *Candida albicans*, 1

Calcium ion effects, electrophoretic mobility, liposomes, phospholipid fluidity, 13
Candida albicans, cerebroside, glycolipid, 9-methyl sphingadienine, branched long chain base, human pathogen, 1
Cerebroside, glycolipid, 9-methyl sphingadienine, branched long chain base, human pathogen, *Candida albicans*, 1
Chemiluminescence, methyl linoleate hydroperoxide, active alumina substrates, oxidation kinetics, lipid peroxidation, 265
Cholesterol, ganglioside, phosphatidylcholine, membrane order, sphingomyelin, 25

Detritylation, phospholipid synthesis, phosphatidylethanolamine, ditrityl glycerophosphoethylanolamine, trityl glycerophosphoethanolamine, 69
Dibenzyl-*sn*-glycerol, synthesis, glycolipid, monoglucosyldiacylglycerol, 113
Differential scanning calorimetry, electron diffraction, phase diagrams, 179
Differential scanning calorimetry, lipid phase transition, phosphatidylethanolamine, 129
Differential scanning calorimetry; phosphatidylcholines; branched chain fatty acids; phase transitions; molar heat capacities, 257
Dimyristoyl phosphatidylcholine, phase diagrams, pressure studies, dipalmitoyl phosphatidylcholine, 227
Dipalmitoyl phosphatidylcholine, phase diagrams, pressure studies, dimyristoyl phosphatidylcholine, 227
Ditrityl glycerophosphoethanolamine, phospholipid synthesis, phosphatidylethanolamine, trityl glycerophosphoethanolamine, detritylation, 69

Electric double layer, monolayer, surface potential, adsorption, phospholipid 161
Electron diffraction, differential scanning calorimetry, phase diagrams 179
Electrophoretic mobility, liposomes, calcium ion effects, phospholipid fluidity, 13
Epoxy alcohol, fatty acid hydroperoxide, vanadium oxyacetylacetonate, trihydroxy acid, stereochemistry, 55

Ethylene glycol monododecyl ether, phosphonolipids, phosphono analogue of lecithin, phosphono analogue of cephalin, 39

Fatty acid hydroperoxide, vanadium oxyacetylacetonate, epoxy alcohol, trihydroxy acid, stereochemistry, 55

Ganglioside, phosphatidylcholine, cholesterol, membrane order, sphingomyelin, 25

Glycolipid, cerebroside, 9-methyl sphingadienine, branched long chain base, human pathogen, *Candida albicans*, 1

Glycolipid, synthesis, monoglucosyldiacylglcerol, dibenzyl-*sn*-glycerol, 113

Higginsia tethyoides, marine organisms, *Axinella verrucosa*, *Tethya aurantia*, *Aplysina fistularis*, HPLC, mass spectrometry, 101

HPLC, marine organisms, *Axinella verrucosa*, *Higginsia tethyoides*, *Tethya aurantia*, *Aplysina fistularis*, mass spectrometry, 101

Human pathogen, cerebroside, glycolipid, 9-methyl sphingadienine, branched long chain base, *Candida albicans*, 1

Infrared, membrane, phenol, salicylic acid, *o*-acetylsalicylic acid, 47

Insulin, vesicles, sulfatide, phosphatidylcholine, 135

Linoleic, oleic, lipids, radical, singlet oxygen, photo-oxidation, 81

Lipid bilayer, phosphatidylglycerol, neutron diffraction, 237

Lipid peroxidation, methyl linoleate hydroperoxide, chemiluminescence, active alumina substrates, oxidation kinetics, 265

Lipid phase transition, phosphatidylethanolamine, differential scanning calorimetry, 129

Lipids, oleic, linoleic, radical, singlet oxygen, photo-oxidation, 81

Liposomes, electrophoretic mobility, calcium ion effects, phospholipid fluidity, 13

Lyso derivatives; platelet-activating factor; biological activity, 247

Lysophosphatidylcholine, phosphatidylcholine, spontaneous vesiculation, unilamellar vesicles, 283

Marine organisms, *Axinella verrucosa*, *Higginsia tethyoides*, *Tethya aurantia*, *Aplysina fistularis*, HPLC, mass spectrometry, 101

Mass spectrometry, marine organisms, *Axinella verrucosa*, *Higginsia tethyoides*, *Tethya aurantia*, *Aplysina fistularis*, HPLC, 101

Membrane, infrared, phenol, salicylic acid, *o*-acetylsalicylic acid, 47

Membrane order, ganglioside, phosphatidylcholine, cholesterol, sphingomyelin, 25

Methyl linoleate hydroperoxide, chemiluminescence, active alumina substrates, oxidation kinetics, lipid peroxidation, 265

9-Methyl sphingadienine, cerebroside, glycolipid, branched long chain base, human pathogen, *Candida albicans*, 1

Molar heat capacities; phosphatidylcholines; branched chain fatty acids; differential scanning calorimetry; phase transitions; 257

Monoglucosyldiacylglycerol, synthesis, glycolipid, dibenzyl-*sn*-glycerol, 113

Monolayer, surface potential, electric double layer, adsorption, phospholipid, 161

Neutron diffraction, phosphatidylglycerol, lipid bilayer, 237

^{13}C-NMR, alcohol-lipid interactions, 215

Nucleic acid coating, bolaamphiphiles, transfection, 193

Oleic, linoleic, lipids, radical, singlet oxygen, photo-oxidation, 81

Oxidation kinetics, methyl linoleate hydroperoxide, chemiluminescence, active alumina substrates, lipid peroxidation, 265

Phase diagrams, electron diffraction, differential scanning calorimetry, 179

Phase diagrams, pressure studies, dimyristoyl phosphatidylcholine, dipalmitoyl phosphatidylcholine, 227

Phase transitions; phosphatidylcholines; branched chain fatty acids; differential scanning calorimetry; molar heat capacities, 257
Phenol, membrane, infrared, salicylic acid, *o*-acetylsalicylic acid, 47
Phosphatidylcholine, ganglioside, cholesterol, membrane order, sphingomyelin, 25
Phosphatidylcholine, insulin, vesicles, sulfatide, 135
Phosphatidylcholine, lysophosphatidylcholine, spontaneous vesiculation, unilamellar vesicles, 283
Phosphatidylcholines; branched chain fatty acids; differential scanning calorimetry; phase transitions; molar heat capacities, 257
Phosphatidylethanolamine, lipid phase transition, differential scanning calorimetry, 129
Phosphatidylethanolamine, phospholipid synthesis, ditrityl glycerophosphoethanolamine, trityl glycerophosphoethanolamine, detritylation, 69
Phosphatidylglycerol, lipid bilayer, neutron diffraction, 237
Phospholipid fluidity, electrophoretic activity, calcium ion effects, liposomes, 13
Phospholipid, monolayer, surface potential, electric double layer, adsorption, 161
Phospholipid synthesis, phosphatidylethanolamine, ditrityl glycerophosphoethanolamine, trityl glycerophosphoethanolamine, detritylation, 69
Phosphono analogue of cephalin, ethylene glycol monododecyl ether, phosphonolipids, phosphono analogue of lecithin, 39
Phosphono analogue of lecithin, ethylene glycol monododecyl ether, phosphonolipids, phosphono analogue of cephalin, 39
Phosphonolipids, ethylene glycol monododecyl ether, phosphono analogue of lecithin, phosphono analogue of cephalin, 39
Photo-oxidation, oleic, linoleic, lipids, radical singlet oxygen, 81
Platelet-activating factor; lyso derivatives; biological activity, 247
Pressure studies, phase diagrams, dimyristoyl phosphatidylcholine, dipalmitoyl phosphatidylcholine, 227

Radical, oleic, linoleic, lipids, singlet oxygen, photo-oxidation, 81

Salicylic acid, membrane, infrared, phenol, *o*-acetylsalicylic acid, 47
Singlet oxygen, oleic, linoleic, lipids, radical, photo-oxidation, 81
Sphingomyelin, ganglioside, phosphatidylcholine, cholesterol, membrane order, 25
Spontaneous vesiculation, phosphatidylcholine, lysophosphatidylcholine, unilamellar vesicles, 283
Stereochemistry, fatty acid hydroperoxide, vanadium oxyacetylacetonate, epoxy alcohol, trihydroxy acid, 55
Sulfatide, insulin, vesicles, phosphatidylcholine, 135
Surface potential, monolayer, electric double layer, adsorption, phospholipid, 161
Synthesis, glycolipid, monoglucosyldiacylglycerol, dibenzyl-*sn*-glycerol, 113

Tethya aurantia, marine organisms, *Axinella verrucosa*, *Higginsia tethyoides*, *Aplysina fistularis*, HPLC, mass spectrometry, 101
Transfection, bolaamphiphiles, nucleic acid coating, 193
Trihydroxy acid, fatty acid hydroperoxide, vanadium oxyacetylacetonate, epoxy alcohol, stereochemistry, 55
Trityl glycerophosphoethanolamine, phospholipid synthesis, phosphatidylethanolamine, ditrityl glycerophosphoethanolamine, detritylation, 69

Unilamellar vesicles, phosphatidylcholine, lysophosphatidylcholine, spontaneous vesiculation, 283

Vanadium oxyacetylacetonate, fatty acid hydroperoxide, epoxy alcohol, trihydroxy acid, stereochemistry, 55
Vesicles, insulin, sulfatide, phosphatidylcholine, 135
Vesiculating pH indicators, 4,4'-bipyridinium ylides, 147

Chemistry and Physics of Lipids, 43 (1987) 305–306
Elsevier Scientific Publishers Ireland Ltd.
